“High quality semi-fluid greases require substantial engineering, raw material selection and precise manufacturing. The difference between our product and others is easily seen in one hard day’s work. Simply watch our COTTON PICKER GREASE in action to see the performance differences and cost savings. Those that try our COTTON PICKER GREASE come back every year.”

Semi-fluid greases are a complex formulation between thickeners, oils and important additives. With most tube (NLGI # 2 or NLGI #1) greases on the market susceptible to excessive bleeding, it is easy to understand why most semi-fluid greases designed for cotton pickers experience even higher rates of bleeding. While Royal’s Cotton Picker Grease offers multiple benefits through superior engineering, the product’s ability to resist breaking down is the characteristic that offers the most value. This is a true price versus cost of use product. Try it and see why users will never switch back to major brand cotton picker grease.

COTTON PICKER SPINDLE GREASE

Product Specifications

NLGI GRADE	#00	#0
Soap Type	Calcium 12 Hydroxy Stearate	Calcium 12 Hydroxy Stearate
Consistency at 77 °F unworked	400/430	355/385
Worked 60 Strokes	400/430	355/385
Dropping Point, °F	260 mins, 2	60 min.
Appearance	Semi fluid, Smooth Buttery, Green Color	Smooth Buttery, Green Color
Odor	Mild Petroleum	Mild Petroleum

CHARACTERISTICS OF OIL IN GREASE

Viscosity, SUS at 100 °F	100/110	100/110
Viscosity, SUS at 210 °F	33/38	33/38
Pour Point, °F	-25 max.	-25 max.

Sharing lubricant knowledge and delivering the highest quality products, two things we promise our customers. The difference will change how you view, purchase and utilize greases and oils from here forward.

Family owned and operated since 1926.
