SPECIALTY LUBRICANTS

ICE MELTING COMPOUND

Safe, Effective & Long Lasting

Extremely Effective

Melts Ice Quickly

Economical

Helps Prevent Re-freezing

Does Not Damage Concrete

Active down to -59F°

ICE MELTING COMPOUND is a favorite among customers. While sand and salt are commonly used in the de-icing of roadways, over time salt can be damaging to some surfaces and sand is a mess once the ice has melted, making neither ideal.

ICE MELTING COMPOUND is a fast acting de-icer that is safe for concrete surfaces. Its ability to melt ice and help prevent refreezing in high traffic areas such as schools, offices, bus stops, parking lots, etc., makes this a wise investment. With a long shelf life, ICE MELTING COMPOUND is a product to keep on hand for when its needed.

“While there are other alternatives on the market, ICE MELTING COMPOUND is the most effective, safe for surfaces and long lasting ice melt. This is a must have for anyone in icy climates, schools, offices, parking lots, etc.”

ICE MELTING COMPOUND

Product Specifications

SIEVE ANALYSIS

Through #4 Screen 95-100%

Through #20 Screen 0-10%

HYDRATION DETERMINATION (25% Solution) 50°F. Rise in Temperature

MELTING ABILITY Melt Ice in Freezer

Active Ingredients Anhydrous Calcium Chloride

Shelf Life Indefinite if kept tightly sealed and dry

NOTE: ICE MELTING COMPOUND attracts moisture from the air. Keep container tightly sealed after each use and in safe, dry area out of reach of children. ICE MELTING COMPOUND has been used freely on most paved surfaces without fear of damage for many years. However, cement and concrete surfaces which have not been properly constructed or have not aged sufficiently may have the tendency to scale and spall. Because we have no control over these factors, the use of ICE MELTING COMPOUND on these surfaces is at customer's risk. ICE MELTING COMPOUND may slightly brown grass at the edge of concrete areas due to drain-off, but grass should become normal again with warm weather. Will not harm shrubs and trees unless they are in low-lying areas where drain off is allowed to stand for a great length of time. To avoid pitting of some concrete areas, sweep clean or flush material as soon as weather permits.

Sharing lubricant knowledge and delivering the highest quality products, two things we promise our customers. The difference will change how you view, purchase and utilize greases and oils from here forward.
